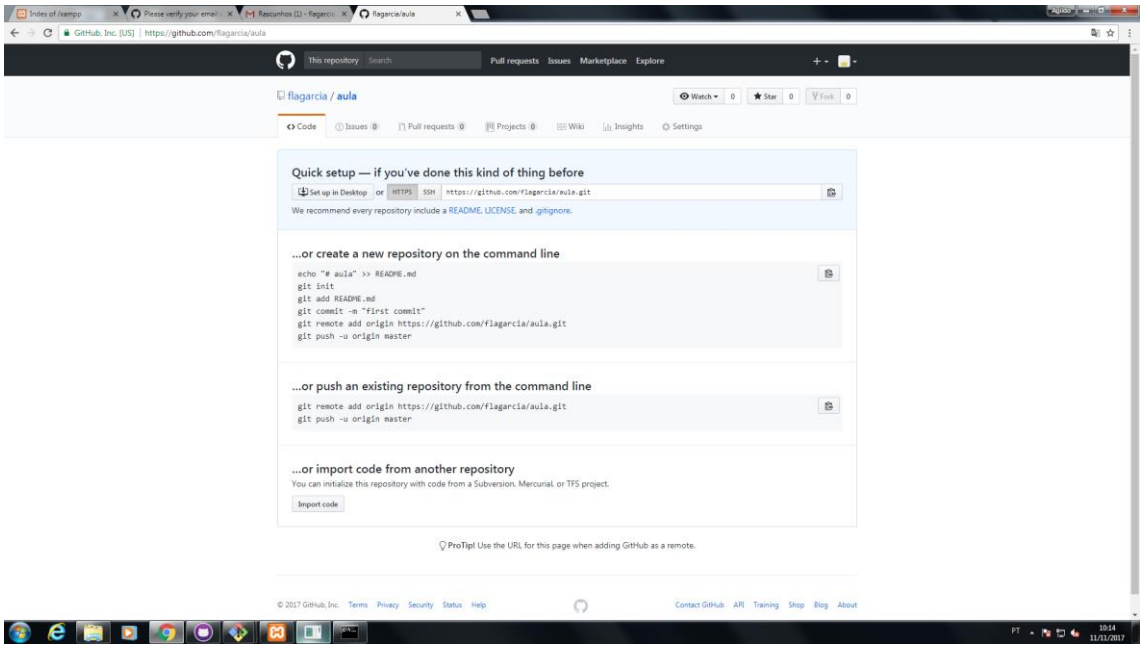
Create a new repository
A repository contains all the files for your project, including the revision history.
Owner
Repository name
flagarcia
aula
The repository aula already exists on this account
Description (optional)
aula senac
Public
Anyone can see this repository. You choose who can commit.
Private
You choose who can see and commit to this repository.
Initialize this repository with a README
This will let you immediately clone the repository to your computer. Skip this step if you're importing an existing repository.
Add .gitignore: None
Add a license: None
Create repository



flagarcia / aula
Quick setup — if you've done this kind of thing before
https://github.com/flagarcia/aula.git
We recommend every repository include a README, LICENSE, and .gitignore.
...or create a new repository on the command line
echo "# aula" >> README.md
git init
git add README.md
git commit -m "first commit"
git remote add origin https://github.com/flagarcia/aula.git
git push -u origin master
...or push an existing repository from the command line
git remote add origin https://github.com/flagarcia/aula.git
git push -u origin master
...or import code from another repository
You can initialize this repository with code from a Subversion, Mercurial, or TFS project.
Import code
ProTip! Use the URL for this page when adding GitHub as a remote.

 Committer: flagarcia <42115152016.1@senacrjedu.local>
Your name and email address were configured automatically based
on your username and hostname. Please check that they are accurate.
You can suppress this message by setting them explicitly:
git config --global user.name "Your Name"
git config --global user.email you@example.com
After doing this, you may fix the identity used for this commit with:
git commit --amend --reset-author
3 files changed, 71 insertions(+)
create mode 100644 index.html
create mode 100644 index.html.docx
create mode 100644 ~$dex.html.docx
